BUG_001	Callback calls are not connecting when the agent is using Softphone in the mobile application.	1. Login to the Mobile Application as an Agent. 2. Configure/use the Softphone. 3. Ensure the agent is available/online. 4. Initiate or trigger a Callback call to the agent. 5. Observe the call connection.	The callback call should connect successfully to the agent's Softphone in the mobile application.	The callback call is not connecting to the agent when the agent is using Softphone in the mobile application.	High	P1	Open	Monesh	App Level	MCUBE	completed	Not the app's side. The app's softphone connects any incoming SIP call generically, with the push/notifySipReady/INVITE handshake and lost-INVITE retry all in place. There's no callback-specific code that could block it. Backend fix (as the note says): route callback calls to a softphone agent through the same FCM-push + SIP-INVITE origination used for normal inbound calls, rather than a hardphone/PSTN dial or a path that skips the softphone handshake.
BUG_003	The disposition for campaign calls is not getting updated in the panel after the call is completed/dispositioned.	1. Login to the application as an Agent. 2. Initiate or receive a call through a Campaign. 3. Complete the call. 4. Select the required disposition for the call. 5. Submit/save the disposition. 6. Navigate to the relevant panel/report and check the call details.	The selected call disposition should be successfully saved and reflected in the panel for the corresponding campaign call.	The disposition is submitted, but it is not updated/reflected in the panel for the campaign call.	High	P1	On Hold	Monesh	App Level	SupremeOne	completed	1. The call is placed as a generic outbound call. From the campaign contacts list, the call button just does No campaign_id is passed — it's identical to dialing any random number. 2. The disposition submit carries no campaign context. add-calldetails sends callid, eid, number, disposition, name, remark, customremark — but no campaign_id. 3. The app never tracks campaign_id through call → disposition (grep across the calling services and all disposition dialogs found nothing). So when the agent dispositions a campaign call, the record goes into the generic call log with no link to the campaign — the panel has no way to know it belongs to a campaign, so the campaign contact's disposition never updates.
BUG_009	Even after Inbound Access is removed/disabled for an agent, inbound calls are still being initiated to the agent.	1. Login to the Panel as Admin. 2. Navigate to the Agent configuration. 3. Remove/disable Inbound Access for an agent. 4. Save the changes. 5. Initiate an inbound call to the business/agent. 6. Observe whether the call is routed to the agent.	After Inbound Access is disabled, inbound calls should not be routed or initiated to that agent.	Inbound calls are still being initiated/routed to the agent even after Inbound Access has been removed.	High	P1	Open	Monesh	App Level	MCUBE	completed	need to handle from backend
BUG_010	Even after enabling Number Masking, the actual phone number is still visible in the Dashboard.	1. Login to the Panel as Admin.2. Enable Number Masking for the business/agent.3. Navigate to the Dashboard.4. Check the customer/contact phone number displayed in the dashboard call details.5. Observe whether the number is masked.	The phone number should be masked and the actual customer number should not be visible anywhere in the Dashboard when Number Masking is enabled.	The actual phone number is still visible in the Dashboard even after Number Masking is enabled.	High	P1	Open	Monesh	App Level	MCUBE		need to handle from backend contact name should not stored as the mobile number
BUG_011	Even after enabling Number Masking, the actual phone number is still visible in the Disposition section.	1. Login to the Panel as Admin.2. Enable Number Masking for the business/agent.3. Initiate or receive a call.4. Complete the call and open the Disposition section.5. Check the customer/contact phone number displayed in the disposition details.6. Observe whether the number is masked.	The customer phone number should be masked in the Disposition section when Number Masking is enabled.	The actual customer phone number is still visible in the Disposition section even after Number Masking is enabled.	High	P1	Open	Monesh	App Level	MCUBE		need to handle from backend contact name should not stored as the mobile number
BUG_013	Even after disabling the Hold feature, the Hold option is still visible in the Mobile Application during an active call.	1. Login to the Panel as Admin.2. Disable the Hold feature for the business/agent.3. Login to the Mobile Application as the affected agent.4. Initiate or receive a call.5. Observe the call screen options.	When the Hold feature is disabled, the Hold option should not be visible or available to the agent during a call.	The Hold option is still visible in the Mobile Application even after the Hold feature has been disabled.	High	P1	Moved to QA	Monesh	Panel level	SupremeOne		feature list we need hold id 31
BUG_016	In the Disposition section, the Scheduled Callback option only provides an Auto Callback option, and there is no option to select Manual Callback.	1. Login to the application as an Agent.2. Initiate or receive a call.3. Complete the call and open the Disposition section.4. Select Scheduled Callback.5. Check the available callback options.6. Observe whether an option to select Manual Callback is available.	The Scheduled Callback section should provide options for both Auto Callback and Manual Callback, allowing the agent to select the required callback type.	Only Auto Callback is available, and there is no option to select Manual Callback.	Medium	P2	Moved to QA	Monesh	App Level	SupremeOne	completed	
BUG_017	Not all Campaigns are visible in the Mobile Application, resulting in a mismatch in the campaign count between the Panel and Mobile Application.	1. Login to the Panel and note the total number of campaigns available.2. Login to the Mobile Application with the same agent/accounn.3. Navigate to the Campaigns section.4. Compare the campaigns displayed in the Mobile Application with those available in the Panel.	The Mobile Application should display all campaigns that the agent/account is authorized to access, and the campaign count should match the Panel.	Some campaigns are missing in the Mobile Application, resulting in a mismatch between the campaign count displayed in the Panel and Mobile Application.	High	P1	IN Discussion	Monesh	App Level	MCUBE	completed	we have added new eid parameter to handle this
BUG_018	Even after creating a contact with Name and Email from the Contact List in the Mobile Application, the contact's Name and Email are not displayed in the Disposition section.	1. Login to the Mobile Application as an Agent.2. Navigate to Contact List.3. Create a new contact with valid Name, Phone Number, and Email.4. Save the contact successfully.5. Initiate or receive a call from the saved contact.6. Open the Disposition section after the call.7. Check the contact details.	The saved contact's Name and Email should be automatically displayed in the Disposition section for the corresponding contact/call.	The contact Name and Email are not displayed in the Disposition section even though they were successfully saved in the Contact List.	High	P1	Open	Monesh	App Level	MCUBE	completed	need to give me valid proof, its working when we trying from our side
BUG_021	When a break is applied to an agent from the Panel, the agent's break status is not getting updated in the Mobile Application.	1. Login to the Panel as Admin/Supervisor.2. Select an active agent.3. Apply a break for the agent from the Panel.4. Login to the Mobile Application with the same agent.5. Check the agent's current status.	The agent's status should be updated to the selected Break status in the Mobile Application immediately after the break is applied from the Panel.	The break is applied successfully from the Panel, but the agent's status in the Mobile Application is not updated and continues to show the previous status.	High	P1	Open	Monesh	Panel level	SupremeOne		
BUG_033	Customer phone number is exposed in the notification when initiating a Number Masked call.	1. Enable Number Masking.2. Initiate a Number Masked call.3. Observe the notification displayed on the device during call initiation.4. Check the phone number shown in the notification.	When Number Masking is enabled, the customer's actual phone number should not be displayed anywhere in the notification. The number should remain masked.	The customer's actual phone number is visible in the notification when a Number Masked call is initiated.	High	P1	IN Discussion	Monesh		MCUBE		need to handle cantact name properly in backend

BUG_034	A Manual Call scheduled from the Disposition section is incorrectly displayed in the Campaign section.	1. Login to the Panel.2. Initiate or open a call and navigate to Disposition.3. Schedule a callback/call and select Manual Call.4. Save the scheduled call.5. Navigate to the Campaign section.6. Observe the scheduled call.	A call scheduled as a Manual Call from Disposition should not be displayed under the Campaign section. It should be shown only under the appropriate Manual Call/Callback section.	The Manual Call scheduled from Disposition is also displayed in the Campaign section.	Medium	P2	IN Discussion	Monesh		MCUBE		The app never creates campaigns — it only reads them (GET /campaigns). There is no campaign-creation call anywhere in the app. When a callback is scheduled, the app just calls add-calldetails with callrequest: true + a call_type discriminator. The backend is what turns that into the campaign-like records you see (e.g. Not Responding_<number>), and the backend decides which panel section to show them in. The app already sends the correct discriminator: call_type: '1' for Manual, '2' for Auto												
BUG_035	When an agent is force logged out from the Panel, the agent is not logged out from the Mobile Application, and applying a break from the App updates the agent's break status in the Panel.	1. Login to the Panel and Mobile Application using the same agent account.2. From the Panel, perform Force Logout for the agent.3. Verify that the agent is still logged in to the Mobile Application.4. From the Mobile Application, apply any Break.5. Check the agent status in the Panel.	When an agent is force logged out from the Panel, the agent should also be logged out from the Mobile Application. The agent should not be able to perform actions such as applying a break, and the agent status should not be updated in the Panel.	The agent remains logged in to the Mobile Application after being force logged out from the Panel and can apply a break. The break status is also updated for the agent in the Panel.	High	P1	On Hold	Rushabh		MCUBE		for this we dont have any push notification from backend. banckend team need to push notification for the force logout we will expire the token												
BUG_037	Break Reasons added from the Panel are not available for selection in the Mobile Application.	1. Login to the Panel.2. Navigate to Break Reason.3. Add a new Break Reason.4. Login to the Mobile Application using the same agent/user account.5. Open the Break option. 6. Check the available Break Reasons.	Break Reasons configured from the Panel should be displayed in the Mobile Application and should be available for selection when applying a break.	The newly added Break Reason is not displayed in the Mobile Application under the Break option.	High	P1	Moved to QA	Monesh		MCUBE		break api is not working												
BUG_038	An agent can initiate a call using a group even when the agent is not assigned to or present in that group.	1. Login to the Panel/Mobile Application with an agent account.2. Ensure the agent is not assigned to the required group.3. Navigate to the calling section.4. Select the group to which the agent is not assigned.5. Initiate a call.6. Observe the call behavior.	An agent should only be able to initiate calls from groups to which the agent is assigned or has access.	The agent is able to select the group and successfully initiate a call even though the agent is not present in that group.	High	P1	Open	Monesh		SupremeOne														
BUG_039	After creating a campaign, clicking the Contact icon in the Campaign View List incorrectly opens the Admin Call Log instead of the campaign's contact details.	1. Login to the Panel.2. Navigate to the Campaign section.3. Create a new campaign successfully.4. Open the Campaign View List. 5. Click on the Contact icon for the created campaign.6. Observe the page that opens.	Clicking the Contact icon should open the contact list/details associated with the selected campaign.	The Admin Call Log is opened instead of the campaign's contact list/details.	High	P1	Moved to QA	Monesh		SupremeOne														
BUG_040	When a number is blocked from the Mobile Application, the Blocked By column in the Panel is displayed as empty.	1. Login to the Mobile Application.2. Block any customer phone number.3. Login to the Panel.4. Navigate to the Blocked Number section.5. Locate the number blocked from the Mobile Application.6. Check the Blocked By column.	The Blocked By column should display the name or details of the agent/user who blocked the number from the Mobile Application.	The Blocked By column is empty for the number blocked from the Mobile Application.	Medium	P2	Open	Monesh		MCUBE		passing eid need to handle from backend												
BUG_048	A Dynamic Campaign created from the Panel is not displayed to the assigned agent in the Mobile Application.	1. Login to the Panel.2. Create a new Dynamic Campaign.3. Assign the campaign to an agent.4. Save the campaign successfully.5. Login to the Mobile Application using the assigned agent's credentials.6. Navigate to the Campaign section.7. Observe the campaign list.	The newly created Dynamic Campaign should be displayed in the Mobile Application for the assigned agent.	The Dynamic Campaign created from the Panel is not displayed to the assigned agent in the Mobile Application.	High	P1	Open	Monesh		MCUBE		filter campaign according agent by eid
